The Leitner Method

The Leitner System is based on the principle of spaced repetition, the idea that our brains will better remember material if we revisit it repeatedly over a length of time. This idea has repeatedly been backed by science as the best way to retain information over long periods of time

Spaced repetition and the 2357 method
 Spaced repetition is a scientifically proven method that involves reviewing information at closer intervals, boosting your memory, and making it less likely you'll forget everything. The 2357 method is a way to plan out your revision sessions as you get closer to exams

HOW SHOULD I DO CUMULATIVE QUIZZING?

Study a topic and add a question or two to your quiz based on what you have learned.

1

Write down the answer somewhere hidden e.g. on the back of the page.

2

The next time you are about to study, take out your cumulative quiz and test yourself on all of the questions you have written previously.

3

Add a question each time you finish studying the next section of a topic.

4

Answer all of the questions that are building up each and every time, before you study fresh material. The list will get longer, but answering the questions will get easier.
